COVID-19 Vaccination

An e-learning resource designed to support the training of the health and care workforce involved in delivering the COVID-19 vaccine programme.

This programme is in partnership with...

Public Health England Health Education England NHS England and NHS Improvement

About the COVID-19 Vaccination programme

The COVID-19 pandemic has caused millions of infections and hundreds of thousands of deaths across the world. Numerous measures have been taken to try to contain the virus and prevent infection but ultimately, the most effective way to stop the pandemic will be the introduction of an efficacious vaccine. Scientists across the world have worked rapidly to develop an effective vaccine. Now it is crucial that the COVID-19 vaccine is safely delivered to as many of those eligible as possible.

This COVID-19 Vaccination e-learning programme is designed to provide the health and care workforce involved in the national COVID-19 vaccination programme with the knowledge they need to confidently promote high uptake of the vaccine and deliver the vaccine programme effectively.

The programme currently consists of a core knowledge session and an assessment session. Vaccine-specific sessions (together with accompanying assessments for each) will be added when COVID-19 vaccines become available. All those undertaking this e-learning should complete the core knowledge session as this is designed to provide essential knowledge about COVID-19 and the key principles of immunisation needed to deliver the vaccine. Once available, learners should then complete the vaccine-specific session(s) which provide more detailed information about the vaccine(s). The assessment sessions should be completed after each knowledge session.

The e-learning sessions describe the national COVID-19 vaccination programme for England. Most of the information in the sessions will be relevant for those involved in the programme throughout the UK and Crown Dependencies. However, those undertaking the programme in Northern Ireland, Scotland, Wales and the Crown Dependencies should be aware that some details as to how the programme will be delivered may be different. Vaccinators should therefore ensure that they refer to any country specific information available so they are familiar with the particular details of the programme for the country in which they are practicing.

More information

This e-learning programme provides theoretical training. Those new to, or returning to vaccination after a prolonged period, will also require face to face practical training in vaccine administration and assessment and competency sign-off before administering the COVID-19 vaccine. Vaccinators should also have completed Basic Life Support and anaphylaxis training and any Statutory and Mandatory training required by their employer.

More information and training resources about the COVID-19 vaccine programme are available on the Public Health England website COVID-19 vaccination programme page.

Additional training for vaccinators

Important: COVID-19 vaccinators should check with their local provider/employer whether they need to undertake the additional training identified below.
